1 Basic Terms of Railway Operation	1
1.1 Basic Track Arrangements.....	1
1.2 Basic Signal Arrangements.....	11
1.3 Movements	18
1.4 Modes of Operation	23
1.4.1 Signal-controlled Operation.....	23
1.4.2 Non Signal-controlled Operation.....	24
2 Dynamics of Train Movements	26
2.1 Tractive Effort.....	26
2.2 Resistances.....	27
2.2.1 Line Resistance	27
2.2.2 Train Resistance.....	31
2.3 Grade-Speed Diagram.....	32
2.4 Running Time Calculation.....	34
3 Spacing Trains	38
3.1 Theory of Train Separation.....	38
3.1.1 Train Separation in Relative Braking Distance	38
3.1.2 Train Separation in Absolute Braking Distance	39
3.1.3 Train Separation in Fixed Block Distance	40
3.2 Non Signal-controlled Operation.....	41
3.2.1 Timetable and Train Order (T & TO).....	41
3.2.2 Radio-Based Occupation Control Systems	43
3.2.2.1 Track Warrant Control (TWC)	43
3.2.2.2 Direct Traffic Control (DTC).....	45
3.3 Signalled Fixed Block Operation.....	45

3.3.1	Basic Rules of Fixed Block Operation.....	45
3.3.2	Blocking Time and Headway Theory	47
3.3.3	Signals for Train Movements.....	52
3.3.3.1	Types of Signals.....	52
3.3.3.2	Principles of Signalling.....	53
3.3.3.3	Signalling of Short Block Sections.....	59
3.3.4	Block Systems.....	61
3.3.4.1	Logic of Block Systems	62
3.3.4.2	Manual Block.....	63
3.3.4.3	Automatic Block	69
3.3.4.4	Absolute Permissive Block (APB).....	78
3.4	Automatic Train Protection	79
3.4.1	Intermittent ATP	79
3.4.2	Continuous ATP	83
3.5	Radio-based Train Control.....	87
3.5.1	Basic Principles.....	87
3.5.2	Radio Electronic Token Block.....	88
3.5.3	Radio-based Block with Virtual Block Sections.....	89
3.5.4	Radio-based Moving Block	89
4	Interlocking Principles	91
4.1	Safe Routes through an Interlocking.....	91
4.1.1	Interlocking between Points and Signals	94
4.1.2	Route Locking.....	96
4.1.3	Locking Conflicting Routes.....	99
4.1.4	Flank Protection	100
4.1.5	Crosslock	103
4.1.6	Overlaps.....	104
4.1.7	Intermediate Points	107
4.1.8	Locking between Interlockings.....	108
4.1.9	Command Interlocking	109
4.1.10	Track Clear Detection.....	110
4.1.11	Automatic Working of a Route.....	110
4.2	Signals in Interlocking Areas.....	111
4.2.1	Interlocking Signals.....	112

4.2.2	Shunt Signals	113
4.2.3	Signalling of Converging Terminal Tracks	115
4.3	Internal Logic of Interlocking Systems.....	117
4.3.1	Tabular Interlocking	117
4.3.1.1	Cascade Locking.....	117
4.3.1.2	Route-related Locking	118
4.3.2	Geographical Interlocking	121
4.4	Interlocking Machines	125
4.4.1	Mechanical Interlocking	125
4.4.2	Electric and Electro-pneumatic Interlocking	127
4.4.3	Relay Interlocking.....	129
4.4.4	Microcomputer Interlocking.....	131
4.4.5	Interlocking Appliances for Hand Throw Points	132
4.5	Blocking Time in Interlocking Areas	134
5	Capacity Research	137
5.1	Dividing a Railway Network in Different Parts for Capacity Research.....	137
5.2	Basic Theory of Capacity Research.....	138
5.2.1	Waiting Time Diagram	139
5.2.2	Recommended Area of Traffic Flow	142
5.3	Research Methods.....	145
5.3.1	Capacity of Lines	147
5.3.1.1	Analytic Methods.....	147
5.3.1.2	Simulation.....	156
5.3.2	Capacity of Interlocking Arrangements.....	158
5.3.3	Capacity of Terminal Tracks	166
5.4	Improving the Capacity	169
6	Scheduling.....	175
6.1	Traffic Diagrams.....	175
6.2	Scheduled Running Time.....	177
6.3	Headways and Buffer Times.....	180
6.4	Clockface Schedules.....	184

6.5	Scheduling Methods	186
6.5.1	Manual Scheduling	187
6.5.2	Computer-based Scheduling	189
6.6	Quality Assessment in Scheduling.....	191
7 Control of Railway Operation		195
7.1	Traffic Control with Local Operators	195
7.1.1	Non Signal-controlled Lines	195
7.1.2	Signal-controlled Lines.....	196
7.1.3	Dispatcher Sheets.....	198
7.2	Centralised Traffic Control.....	199
7.3	Automation Technologies.....	200
7.3.1	Train Describers.....	200
7.3.2	Automatic Route Setting.....	202
7.3.3	Computer-based Dispatching.....	207
7.4	Control Centres	210
Symbols in Track and Signal Diagrams.....		212
Glossary		213
Suggested Reading		234
Index		236

List of Illustrations

1.1	Cross-section of a Track	2
1.2	Classification of Tracks	2
1.3	Components of a Turnout	3
1.4	Turnout with Point Machine (Swiss Railways).....	4
1.5	Movable Frogs	4
1.6	Movements on Points.....	5
1.7	Fouling Point Indicator (German Railways).....	5
1.8	Crossings.....	6
1.9	Slip Crossings	6
1.10	Track Layout with Four Double Slip Crossings arranged around a Rigid Crossing (Bern, Switzerland)	7
1.11	Examples of Tangent Diagrams	8
1.12	Derail operated by a Point Machine (German Railways).....	9
1.13	Basic Turnout Arrangements	10
1.14	Yard Layout	11
1.15	Different Design of Lineside Signals.....	13
1.16	Large Interlocking Tower (Frankfurt, Germany).....	14
1.17	Interlocking Limits (North American Practice)	15
1.18	Station Limits (British Practice), Line with Left Track Operation	16
1.19	Home Signal Limits (German Practice).....	17
1.20	Home Signal Limits with Intermediate Interlocking Signals	17
1.21	Dwarf Shunt Signals (Left: German Railways, Right: Swiss Railways) 20	
1.22	Shunting Limits (German Arrangement as Example for European Practice).....	20
1.23	Yard Limits (North American Practise).....	21
1.24	Signal Arrangements on Double Track Lines.....	22
1.25	Non Signal-controlled Operation	24
2.1	Tractive Effort Curve.....	27
2.2	Wheelset on Track	29
2.3	Sine Running on Tangent Track	30
2.4	Crosswise Gliding.....	30
2.5	Grade-Speed Diagram.....	33
2.6	Elements of a Train Movement between 2 Stops.....	34
2.7	Calculation of a Single Polygon Step in Acceleration Mode.....	36
2.8	Extra Time for Braking and Accelerating.....	37

3.1	Train Separation in Relative Braking Distance	39
3.2	Train Separation in Absolute Braking Distance	40
3.3	Train Separation in Fixed Block Distance	41
3.4	Track Warrant Form	44
3.5	Control Length of Signals in a Fixed Block Territory	46
3.6	Blocking Time of a Block Section	48
3.7	Blocking Time “Stairway”	49
3.8	Signal Headway and Line Headway	49
3.9	Minimum Line Headway on an Electric City Railway	50
3.10	Blocking Time of Moving Block compared to Fixed Block	51
3.11	North American Semaphore Signal	52
3.12	Types of Light Signals	53
3.13	Different Principles of Approach Indication	55
3.14	German Ks Signal Aspects	57
3.15	Colour Light Signal Aspect of the NORAC Signal Rules	58
3.16	Signal Aspects of the OSŽD system	59
3.17	Principles of Signalling of Short Block Sections	60
3.18	Example of a Telephone Block System	63
3.19	Protecting Following Movements in the German Interlocked Block System	66
3.20	Ancient German Block Apparatus at an Intermediate Block Station	67
3.21	Opposite Locking in the German Interlocked Block System	68
3.22	Insulated Rail Joints (German Railways)	70
3.23	Track Circuit	71
3.24	Jointless Track Circuits	72
3.25	Axle Counter	74
3.26	Absolute and Permissive Signals in an Automatic Block Territory	76
3.27	Principles of Overlap Protection in an Automatic Block Territory	77
3.28	Principle of Absolute Permissive Block	79
3.29	Trip Stop Device on an Electric City Railway (Berlin, Germany)	80
3.30	Trackside Magnet of the German Inductive ATP System	81
3.31	Principle of Intermittent ATP Working	81
3.32	Reduced Lineside Signalling in a Cab Signal Territory	83
3.33	Cross Point (“Zero Point”) in the LZB Loop	84
3.34	Principle of Guiding Trains in LZB Territory	85
3.35	Principle of Guiding Trains in older Continuous ATP Systems with Coded Track Circuits	86
3.36	Basic Principle of Radio-based Train Control	87
3.37	Principle of Radio Electronic Token Block	88
3.38	Virtual Block Sections	89
3.39	Radio-based Moving Block	90

4.1	Interlocked Train Routes in a Signal-controlled Operation	93
4.2	Elements of a Route with Entrance and Exit Signal	94
4.3	German Type Clamp Lock Mechanism	95
4.4	Basic Principles of Route Locking.....	96
4.5	Blocking Time of Locked Points with a Complete Route Release	97
4.6	Blocking Time of Locked Points with a Sectional Route Release	98
4.7	Need for a Special Locking of Conflicting Routes	99
4.8	Remote Flank Protection.....	101
4.9	Selective Protective Points.....	102
4.10	Examples of Self-Selective Protective Points	103
4.11	Example of a Crosslock	103
4.12	Example of a Multiple Crosslock with Three Pairs of Points	104
4.13	Different Principles of Placing Home Signals	105
4.14	Swinging Overlap protected by a Conditional Crosslock	106
4.15	“Overlapping Overlaps” in German Interlockings.....	107
4.16	Intermediate Points	108
4.17	Locking between Interlockings.....	108
4.18	Combining and Separating the Track Sections of Adjacent Points.....	110
4.19	Points to be protected by an Interlocking Signal.....	113
4.20	Example of a Track Layout with Interlocking and Shunt Signals (typical German Arrangement).	114
4.21	Shunt Signals to be cleared for a Train Route.....	114
4.22	Signalling of Converging Terminal Tracks.....	116
4.23	Locking Table for Cascade Locking.....	119
4.24	Locking Table for Route-related Locking	120
4.25	Geographical Interlocking.....	122
4.26	Flank Protection Reverse Element in a Geographical Interlocking	123
4.27	Locking Conflicting Opposing Routes by Overlapping Exit Elements	124
4.28	Selective Protective Points in a Geographical Interlocking	124
4.29	North American Mechanical Interlocking Machine.....	126
4.30	German Mechanical Interlocking Machine (Left in the Background the Electric Block Apparatus above a Row of Route Levers).....	126
4.31	German Electric Interlocking Machine.....	128
4.32	North American Electro-pneumatic Interlocking Machine.....	128
4.33	Ancient North American Relay Panel (no NX Operation).....	130
4.34	German Relay Panel with Push Button NX Operation	130
4.35	German Class C Relay	131
4.36	Operator’s Console of a Microcomputer Interlocking System (German Railways).....	132
4.37	Blocking Time in an Interlocking Area on a Line with Overlaps	135
4.38	Blocking Time in an Interlocking Area on a Line without Overlaps	136

5.1	Dividing a Railway Network in Different Parts for Capacity Research.....	138
5.2	Waiting Time Diagram	139
5.3	Timetable Capacity	140
5.4	Reducing Transmission of Delay by Equalizing Speed Differences.....	141
5.5	Influence of the Harmonisation of the Schedules on the Difference between Timetable Capacity and Maximum Capacity.....	141
5.6	Relative Sensitivity of the Waiting Time	143
5.7	Traffic Energy	144
5.8	Recommended Area of Traffic Flow	145
5.9	Classification of Methods for Capacity Research	146
5.10	Steps of Analytic Capacity Research	148
5.11	Determining the Minimum Line Headways.....	150
5.12	Principle of Calculating the Blocking Time Overlap of a Block Section	151
5.13	Timetable Example (one Direction of a Double Track Line)	153
5.14	Visualisation of the Sum of Minimum Line Headways for the Example of Figure 5.10.....	154
5.15	Determining the Maximum Line Capacity by Measuring the Traffic Flow at the Output of the Line for an Increasing Input.....	157
5.16	Example of Simulating an Unlimited Input to determine the Maximum Line Capacity	158
5.17	Dividing an Interlocking Arrangement into Single Channel Layout Elements	159
5.18	Example of Interdependencies between 3 Routes.....	160
5.19	Route Locking Table.....	161
5.20	Improved (ideal) Layout to the Arrangement of Figure 5.19.....	162
5.21	Diagram of Non-conflicting Routes.....	165
5.22	Tree Diagram of Possible States of an Interlocking.....	166
5.23	Inbound-Outbound Traffic Diagram of a Terminal	168
5.24	“Tidal Wave” of Peak Traffic Flow running through a Large Freight Terminal	168
5.25	Speed and Direction Fleeting to improve the Timetable Capacity.....	170
5.26	Effect of Reduced Block Length on the Blocking Time	172
5.27	Improving the Capacity of an Interlocking by Modifying the Track Layout.....	174
6.1	Principle of a Traffic Diagram (Double Track Line)	176
6.2	Traffic Diagram with Horizontal and Vertical Station Axis	176
6.3	Station Traffic Diagram	177
6.4	Combined Traffic Diagram that shows the occupation of Line and Station Tracks	178

6.5	Principles of Adding Recovery Time to a Schedule	179
6.6	Classification of Line Headways	180
6.7	Buffer Times on a Double Track Line	181
6.8	Buffer Times at a Passing Station	182
6.9	Buffer Path	183
6.10	Buffer Time for Changing of Passengers at a Connecting Station	184
6.11	Constraint of Clockface Schedules on Single Track Lines	185
6.12	Principle of a Timetable with Integrated Clockface Schedules	186
6.13	Principle of Manual Scheduling	188
6.14	Allocation of the Dwell Time to Block Sections	189
6.15	Visualisation of a Scheduling Conflict	190
6.16	Criteria for the Recoverability of the Timetable	192
6.17	Transmission of Delays on a Single Track Line with Clockface Schedules	193
7.1	Traffic Control with Local Operators on a Signal-controlled Line	196
7.2	Cutout from a North American Dispatcher Sheet	198
7.3	Cutout from a German Dispatcher Sheet	199
7.4	Centralised Traffic Control	200
7.5	Route Selection by a Programmed Route Sequence	203
7.6	Route Selection by Train Description	203
7.7	Optimal Approach Point for Automatic Route Setting	204
7.8	Priority Decision at an Intersection	206
7.9	Simple Deadlock Examples	206
7.10	Iteration between Calculation of Train Paths and Blocking Times	207
7.11	Traffic Diagram Example with a Schedule Conflict	208
7.12	Event Sequence Graph of the Example of Figure 7.11	209
7.13	Typical Structure of a Control Centre	211
